Project Initialization and Planning Phase

Project Name:	TripTrek: Intelligent Travel Planning using Palm's Chat-Bison-001 Model
Team ID:	SWTID1720506503
Team Members:	Gurram Sai Nikhileswar Sai Puneeth Balaji N. Vishnu Teja Manya Dsouza

Problem Statement:

In this age that is heavily influenced by artificial intelligence and everywhere where there are innovations, AI is certainly helping in some way. So, in a way we can say that we are witnessing the artificial intelligence on the rise and slowly, it certainly makes its mark in every imaginable field and it can be helpful in many ways than chaotic. In this busy age, where time is money and everyone values time more than they value actual money certainly shows that tides are changing, so we should too!

Many people that may be general public or business professionals, everyone has little time to plan ahead, so most of them when they go on trips, they do not plan ahead and hit dead-ends sometimes!! Which is not preferred in this day and age. But everyone is busy with their life themselves, it leaves little time to plan ahead for any travelling. So, our problem statement is to solve this persisting problem to solve the challenges involved with travelling by providing the users with a solution that they can use whenever they travel so that they can get their itinerary for their day and making it also to include food places they can dine on to help reduce their burden on creating a plan when everyone can jump into the actual fun and fall into love with travelling!
